Key: CBL = Cable; CBL 1.3 = Cable, HDMI v1.3 (1080p); CBL 1.4 = Cable, HDMI v1.4 (4K); SLMCBL 1.4 = Single Locking HDMI v1.4 Cable; DLCBL 1.4 = Dual Locking HDMI v1.4 Cable; DVID CBL = DVI-D Cable; DVII CBL = DVI-I Cable; SLMCBL 1.4 = Slim HDMI v1.4 Cable; DNG = Dongle; LDNG = Dongle w/locking HDMI; CPL = Coupler; ADP = Adapter; ACT = Active; AOC = Active Optical Cable; CBL 2.0 = Cable HDMI 2.0 with Ethernet; PAS = Passive

## WHEN TO CHOOSE AN ACTIVE DISPLAYPORT ADAPTER

When you connect a source with a (mini)DisplayPort interface to one or more DVI or HDMI display(s), you need to know the difference between active and passive video adapters.

PCs and other video sources with dual-mode DisplayPort (also known as DP++) interface support the conversion between DisplayPort and HDMI or DVI. You can use a **passive video adapter**. Watch out for the DP++ symbol at your source port.

Use always an **active video adapter**, if your video source has a single-mode DisplayPort interface or needs to support multiple video outputs. Active adapters are equipped with an internal chip that performs the conversion between single-mode or dual-mode DisplayPort and HDMI or DVI.
